

March 31, 2020 Update

Six (6) Ludeman residents and seven (7) Ludeman employees have now tested positive for COVID -19.

All six residents reside in a single home. At least one of these residents has been hospitalized. As a guardian you would have already been contacted by the Center if your loved one lives in this home.

No staff who has been working in the effected house will be working with residents from any other Ludeman home. We are informed that staff has the necessary PPE (Personal Protective Equipment) in the home including N-95 masks for those providing medical treatment.

Remember we have been assured that as guardians you will always be directly contacted if a Ludeman home your loved one lives in has had a known exposure to COVID-19.
